DETAILED ACTION

Allowable Subject Matter

1. Claims 1-11 are allowed.

Takiguchi clearly teaches the construction of a noise suppression system for a permanent-magnet motor, in which the motor includes supply brushes connected to an external power supply by leads, which are associated with inductors.

Lau et al. teach the construction of a rotor of an electric motor wherein:

each of the brushes is separately connected to a star point and to the terminal portion of the commutator segment by at least one noise suppression;

a shaft rotatable relative to a casing having an output;

a plurality of capacitors with at least one of said capacitors separately connecting each of said brushes to said casing;

said casing being grounded via connection to a vehicle function device; and

each of said brushes is connected to said power supply with a supply lead forming a plurality of noise suppression circuits.

Wille et al. teaches the use of ferrite core choke coils on a motor.

2. The following is an examiner's statement of reasons for allowance.

The prior art of record, taken alone or in combination, fails to teach the construction of a noise suppression system for a permanent-magnet motor as described on independent claims 1 and 6, comprising supply brushes connected to an external power supply and separately connected to a metal casing of the motor through at least one noise suppression capacitor, said metal casing connected to the vehicles earth.

Dependent claims 2-5 and 7-11 considered allowable by their respective dependence on allowed independent claims 1 and 6.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. See PTO-892.
